

**9MM**  
LAW ENFORCEMENT  
RISK MITIGATION  
**(LERM)**

LAW ENFORCEMENT RISK MITIGATION (**LERM**) TECHNOLOGY IS THE NEXT EVOLUTION IN AMMUNITION. Z FORCE INTRODUCES THE 90 GRAIN 9MM PROJECTILE TO TAKE ON THE GROWING THREAT OF ACTIVE SHOOTER SCENARIOS WITH PRECISION AND LETHALITY, WHILE MITIGATING RISK TO INNOCENT BYSTANDERS.

**THE NEW 9MM LERM** IS THE PREFERRED CHOICE WHEN DEALING WITH A LETHAL SITUATION IN A HIGH TRAFFIC AREA. OVER PENETRATION PROBLEMS CREATE EXTREMELY DIFFICULT SITUATIONS FOR LAW ENFORCEMENT IN AIRPORTS, SHOPPING MALLS, NIGHTCLUBS AND OTHER CROWDED URBAN ENVIRONMENTS WHERE INNOCENT BYSTANDERS ARE LESS THAN INCHES AWAY. **9MM LERM** ROUNDS IMPART THEIR ENERGY ONLY ON WHAT THEY STRIKE. MOLECULARLY CONSTRUCTED POLYMER COPPER PROJECTILES ARE DESIGNED TO DETONATE IN A UNIFORM PATTERN. THIS MEANS THAT WALLS, DOORS, WINDOWS AND OTHER LIGHT BARRIERS TAKE THE BRUNT OF THE IMPACT, SENDING WHAT IS LEFT OF THE PROJECTILE TOWARDS THE GROUND IN A UNIFORM PATTERN SMALLER THAN A GRAIN OF SAND.

**THE LIGHTWEIGHT CONSTRUCTION** and low density of Z Force rounds enable the projectile to be shot accurately and with lethal force up to **100yds** away. The 9mm LERM loses its kinetic energy after 200yds, thus significantly reducing the 9mm bullets maximum lethal trajectory.

Unlike anything on the market today, the **9MM LERM** round is designed to decrease wear and tear and heat transfer on the weapon compared to traditional ball or match ammo. Although the 9mm LERM is only 90 grains, it is **specifically designed to be shot from the most common handguns** used in law enforcement agencies today.

LAW ENFORCEMENT  
RISK MITIGATION  
(LERM)

# 9MM LERM

MODELS CURRENTLY IN PRODUCTION

JB1.300 MK1

The traditional round nose, provides 15" of penetration without expanding.

*I'm assuming these should look different?  
Are the names correct?*

JB1.300 MK1-HP

Hollow Point

The hollow point will penetrate 8" and expand up to 2", creating a much more lethal hyper cavitation channel.

# 9MM

## LAW ENFORCEMENT RISK MITIGATION (LERM)

TRAINING ON STEEL AT CLOSE RANGE PROVIDES VERY LIMITED RISK TO THE SHOOTER. USING ADVANCED MATERIALS, THE PROJECTILE WILL NOT BOUNCE OR RICOCHET BACK TOWARDS THE SHOOTER. RANGE STEEL WILL NOT BE DENTED OR MARRED IN ANY WAY DURING EVEN THE MOST INTENSE TRAINING SITUATIONS.

- UNMATCHED LETHALITY OUT TO **400YDS**
- NEXT GENERATION RISK MITIGATION TECHNOLOGY
- DECREASED WEAR AND TEAR ON WEAPONS
- LEAD FREE
- DOES NOT DIMPLE STEEL TARGETS DURING TRAINING, PROLONGING THE LIFE OF THE RANGE
